

What Is RadJav?

RadJav is a next generation blockchain based platform for rapid application development (RAD) and creating highly secure smart contracts and Dapps. RadJav is a decentralized value-driven platform that serves the greater blockchain community & developers that seek ease-of-use, greater efficiency, and a more unified system to quickly develop and deploy enterprise-strength applications globally. RadJav's version 1.0 platform is live & currently available for download.

The Problems RadJav Solves!

- Scalability & Transaction Speed – RadJav's new performance based smart routing architecture will be designed to support millions of users
- Reduce Development Time & Expenses – Its rapid application development platform enables the highly efficient and secure creation of apps, dapps and smart contracts on one platform
- Increased Security – RadJav will deliver high level security solutions both within the applications developed on its platform and across its network

Planned Feature Releases

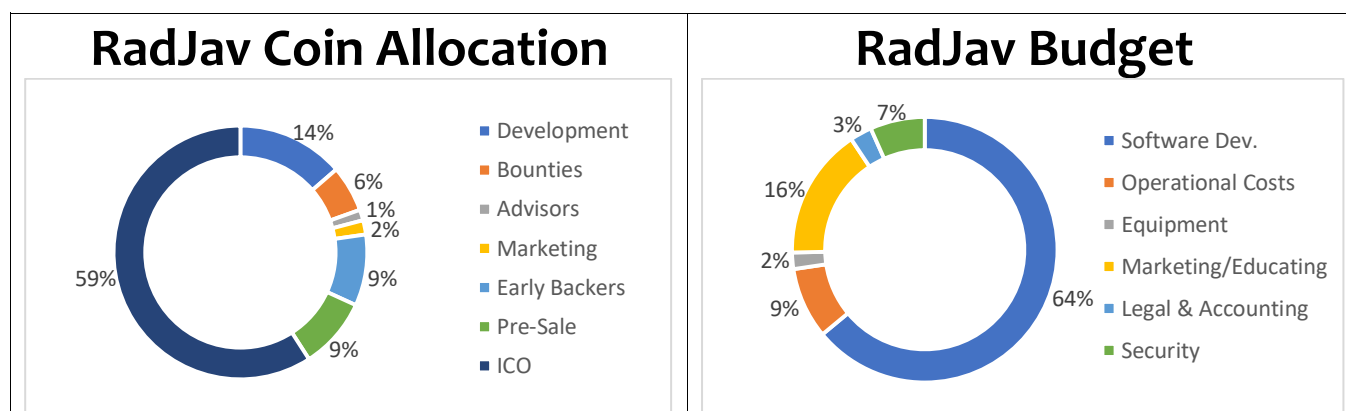

- 3D Engine for gaming and virtual environments
- Hyper Competitive utilizing Proof of Competition, the fastest decentralized network
- Decentralized high security hosting platform
- Mobile app development

Currently Compatible With

RadJav Targets A Big Global Market

The application development and deployment software market is projected to grow at a CAGR of 25.6% from \$110.7 billion in 2017 to \$346.4 billion in 2022. (Source: Transparency Market Research)
